INVENTOR'S DECLARATION OF ORIGINALITY

I, Por Vue, hereby declare that I am the original inventor of the following idea:

A wearable, necklace-style flotation device that detects panic, elevated heart rate, or drowning conditions via biometric sensors or voice input, and automatically inflates using a CO2 cartridge to lift the wearer's head above water.

This device is specifically inspired by the needs of my autistic son and is intended to protect individuals with special needs, nonverbal communication, or limited swimming ability.

This concept, including all related schematics, system descriptions, trigger mechanisms, and wearable design principles:

- Was conceived independently and originated from my personal experience, need, and ideation.
- Was not copied, adapted, or derived from any online publication, product, or source.
- Has been documented and timestamped via OpenAI's secure systems on June 7, 2025.

This declaration serves as proof of originality and intent to protect and develop this life-saving idea for public good.

Signed,

Por Vue
